DETAILED ACTION

Response to Amendment

This Office Action is in response to applicant's amendment filed 12/30/04. Applicant has amended claims 1 and 25 to recite the allowable subject matter of claims 22 and 27 as indicated in the previous office action. Thus, claims 22 and 27 were rendered superfluous and cancelled by applicant. Claims 28-34 were allowed in the previous office action. Therefore, claims 1-21, 23-26, and 28-34 are pending at issue.

Allowable Subject Matter

Claims 1-21, 23-26, and 28-34 are allowed.

The following is an examiner's statement of reasons for allowance: None of the cited prior art discloses or suggests identifying changes in the reactive coating as a result of the sensed evanescent fields influenced by the material, and comparing shifts in each long-period grating signature of a specific loss band so as to calculate different properties of said material. Furthermore, none of the cited prior art discloses or suggests a detector for detecting a coupling wavelength for a specific loss band, wherein the coupling wavelength is defined by the equation: $\lambda = (n_g - n_{cl})\Lambda$ wherein:

λ = coupling wavelength for a specific loss band

Λ = grating period

n_g = effective index of refraction of the guided mode of the optical fiber

n_{cl} = effective index of a cladding mode of the optical fiber;

a means for solving a series of equations that compare changes in the coupling wavelength for a specific loss band.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: US Patent No. 6,542,688 to Gaylord et al, and US Patent No. 5,641,956 to Vengsarkar et al, which disclose related optical sensing devices with long period gratings. Also, "Composite Films for Modifying Evanescent Wave Characteristics in Long-Period Grating Biosensors," by Jennifer E. Martin, and "Applications of Long-Period Gratings to Single and Multiple-Parameter Sensing," by Bhatia disclose related optical sensing devices that employ long period gratings.
